Beyond control ...

The Parguim's solution

Based on the localization through GPS and the GPRS communication network or a reliable satellite, the solution of GPS tracking of Parguim Tracking can track in real time and in an historical manner the activities of your vehicles from any other device whiles connected to the Internet.

This localisation is done through a package mounted in the vehicle. This tracker is composed of a GPS meant to determine the position of the vehicle and of a GPRS modem or satellite for the transmission of relative datas.

At any moment from your computer or any terminal (PDA, Blackberry, iPhone) that can connect through the Internet, you can know in real time your fleet activity, view the detailed reports.

Functionalities

The Parguim tracking solution provides the real time field information which improves the efficiency of your fleet, and reduces the operating expenses and increases safety of your equipment as well as that of the staff. All real time information can instantly be accessible from your device via the Internet.

Detailed Vehicle movement information: Speed, direction, distance covered, level of fuel in the car, and much more information is accessible with a single click on the mouse. Current or historic location information of any vehicle are displayed on detailed satellite carts and provided by .

Vehicle Status Information: Vehicle status information such as start up of the car engine, door open, wear of seatbelts are immediately shown by icons on the screen.

Automatic Warnings: Be immediately notified via e-mail or SMS of specific events such as exceeding the speed limit, entry in a restricted area, or use of a panic button and so on. . .

Remote distance: In case of theft or specific events, the Parguim Tracking device allows you to stop the car engine at a distance, take real time pictures of the strategic points in and around the vehicle (presence or absence of load, supervision of sensitive load)

Parguim.com

Combining performance and efficiency, whatever may be your profession or your business environment Parguim Tracking will be of great support on several aspects.

Personnel and Fleet Safety

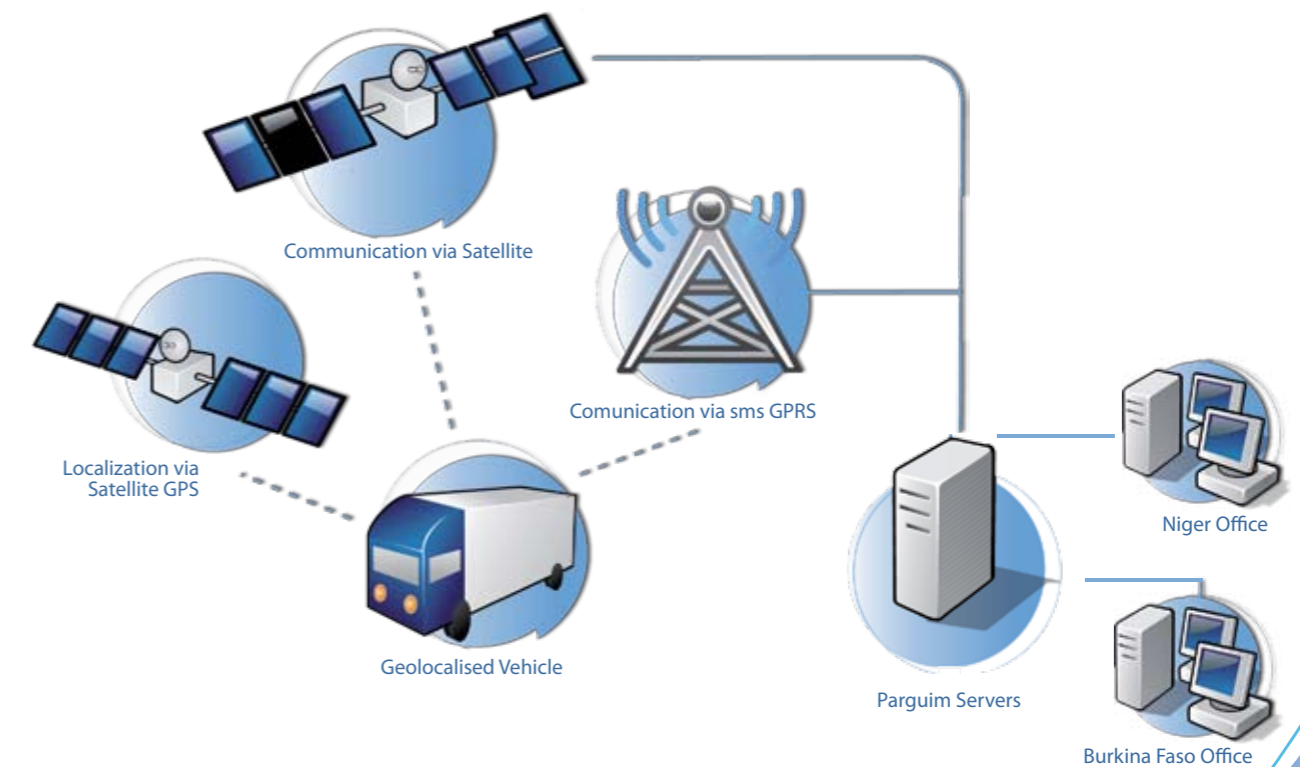

- Reduce accident risks and incidents. Monitor aggressive driving behavior of the drivers through the control of speed and the effective use of seatbelts
